NicoletOne™

NicoletOne is the modular neurodiagnostic system from VIASYS Healthcare. Whether you require a range of neurodiagnostic procedures or test protocols that dictate specific combinations of test modalities such as:

- EEG
- EMG
- NCV
- LTM
- EP, the NicoletOne system is your answer.

SIMPLE YET SOPHISTICATED

NicoletOne’s Windows-based user interface is simple to use, dramatically speeding up the training process.

COMBINING PREMIER PRODUCTS

NicoletOne was conceived and designed to address the financial pressures facing healthcare professionals, such as:

- Managing patient volume
- Return on investment and
- Future growth, without compromising the quality of care.

Each modular solution of the NicoletOne system is "best in class," so you make no compromise with the quality of equipment you rely on.

VIASYS Healthcare – Excellence for Life

VIASYS HEALTHCARE—EXCELLENCE FOR LIFE

For more information about our audiology, neurodiagnostic, peripheral vascular, and monitoring equipment, contact your VIASYS Healthcare professional. Offices in the U.S., Iceland, United Kingdom, Netherlands, Germany, and Japan with representative organizations worldwide.
NicoletOne

In today’s healthcare environment, providing quality care requires a balance between the capabilities of diagnostic systems and their ease-of-use. NicoletOne® is designed to achieve this balance by offering high-quality diagnostic information, in formats that are easy to use and customizable, through an intuitive user interface designed to abbreviate the learning curve.

A key component of any neurodiagnostic application is the patient record and data management operation. Our V-Link® option reduces errors and improves efficiency by integrating your Hospital Information System (HIS) with a common patient/file management interface, application modules offering the level of stand-alone system functionality and a user interface focused on minimizing training time.

As with all of our systems, NicoletOne provides the perfect balance of simplicity, ease of use, and flexibility, making it the ideal choice for all of your diagnostic needs.

**SIMPLE, YET SOPHISTICATED**

**COMBINING PREMIER PRODUCTS**

**EEG MODULE**

The NicoletOne EEG module is a comprehensive, 40 channel EEG system. Powerful, flexible and easy to use, the EEG module combines sophisticated signal analysis with innovative usability features making it the ideal choice for all of your EEG needs.

**SLEEP MODULE**

Increase the functionality of your EEG or LTM module with the NicoletOne Sleep option. This option transforms your NicoletOne system into a fully-functioning Sleep machine, boasting a unique adaptable R&K scoring method.

**LTM MODULE**

The Long Term Monitoring (LTM) module offers unlimited, network based recording with clear displays of large montages. Unique compact digital amplifiers record 32 or 64 channels, or can be combined for up to 128 channels.

**MONITOR (ICU/nICU) MODULE**

NicoletOne offers you a unique blend of simplicity and sophistication. With touchscreen display, 16 or 32 channels and unlimited recording time, the NicoletOne Monitor is specifically designed with the challenges of the ICU and neonatal ICU environment in mind.

**EMG MODULE**

The VikingQuest EMG module brings the Nicolet Viking series’ gold-standard in EMG and Nerve Conduction Studies to the NicoletOne system. From basic Motor Nerve studies all the way to Single Fiber EMG.

**EVOKED POTENTIAL MODULE**

The time-tested reliability of the VikingQuest system provides you with an Evoked Potential system for somatosensory, visual and auditory examinations you can depend on during diagnostic exams and surgery.

**SUPERIOR FUNCTIONALITY**

• Easy-to-use, high-quality amplifiers and detectors result in the best data possible.
• Advanced software capabilities with user-friendly controls provide the answers you want – quickly.
• Grounding electrodes and stimulators result in the best data possible.

**A CONTINUUM OF CONFIDENCE**

Camping out from its origins as Nicolet Biomedical, VIASYS Healthcare continues to offer the leading technologies and the largest and best trained support organization in the neurodiagnostic industry.

**COMPANY**

With more than a century of combined experience, our trusted brands, Nicolet, Grason-Stadler and Toennies have provided innovative technologies for diagnostic audiology, neurodiagnostic, peripheral vascular and handheld Doppler equipment.

**EXPERIENCED SUPPORT**

Our more than 220 trained regional and in-house representatives provide unmatched customer support. We’re committed to helping you get the most out of your VIASYS diagnostic and monitoring systems.

**HARDWARE**

As with all our products, NicoletOne provides the perfect balance of simplicity, ease of use, and flexibility. Quality amplifiers and precise measurement tools for each application provide complete reliability and accuracy.

**SUPPLIES**

To complement the performance offered by all of our systems, we offer a full line of quality electrodes and supplies.

**VIASYS NeuroCare**

products continue to keep practices of all sizes connected with the best in neurodiagnostic technology.

**VIASYS Healthcare and Nicolet provide the highest quality products and service in the industry. NicoletOne is the perfect extension to any clinical practice.**

**PIONEERING CONNECTIVITY**

• VIA Link helps manage system connectivity by patient record, channel data and workflow across all VIASYS NeuroCare products in your lab.
• All NicoletOne modules are fully integrated with the NextCare® patient administration, so you need to learn a new interface.
• Your lab utilizes its interface with NextCare through your HIS.

**SUPERIOR FUNCTIONALITY**

• Easy-to-use, high-quality amplifiers and detectors result in the best data possible.
• Advanced software capabilities with user-friendly controls provide the answers you want – quickly.
• Grounding electrodes and stimulators result in the best data possible.

**VIASYS NeuroCare**

products continue to keep practices of all sizes connected with the best in neurodiagnostic technology.

**PIONEERING CONNECTIVITY**

• VIA Link helps manage system connectivity by patient record, channel data and workflow across all VIASYS NeuroCare products in your lab.
• All NicoletOne modules are fully integrated with the NextCare® patient administration, so you need to learn a new interface.
• Your lab utilizes its interface with NextCare through your HIS.
In today’s healthcare environment, providing quality care requires a balance between the capabilities of diagnostic systems and their ease-of-use. NicoletOne is designed to achieve this balance by offering high-quality diagnostic information, in formats that are easy to use and customizable through an intuitive user interface designed to shorten the learning curve.

A key component of any neurodiagnostic application is the patient record and data management operation. Our “VAM®” option reduces errors and improves efficiency by integrating to your Hospital Information System (HIS).

With a common patients/visit management interface, applications modules offer the level of stand-alone system functionality and a user interface focused on maximizing training. NicoletOne offers you a unique blend of simplicity and sophistication.

**V-Link helps manage system connectivity, seamless data collection and workflow across all VIASYS NeuroCare products, in your lab.

**All NicoletOne modules are fully integrated with the Nicolet patient administration, so used to learn a single interface, you’ll learn them all.

**V-Link allows you to interface пациen data to your HIS.

**Innovative hardware capabilities and user-friendly controls provide the answers you want—quickly.

**Leading interface technology integrated with NicoletOne for a truly customizable user experience in a true, modular system.

### COMBINING PREMIER PRODUCTS

**EEG MODULE**

The NicoletOne EEG module is a comprehensive, EEG system. Powerful, flexible and easy to use, the EEG module combines sophisticated signal analysis with innovative usability features making it the ideal choice for all of your EEG needs.

**SLEEP MODULE**

Increases the functionality of your EEG or EMG module with the NicoletOne Sleep option. This option transforms your NicoletOne system into a fully functioning Sleep machine, boasting a unique, adaptable scoring method.

**STM MODULE**

The Long Term Monitoring (STM) module offers unlimited, network tolerant recording with clear display of large montages. Unique compact digital amplifiers record 32 or 64 channels, or can be combined for up to 128 channels.

**MONITOR (ICU/nICU) MODULE**

With touchscreen display, 16 or 32 channels and unlimited recording time, the NicoletOne Monitor is specifically designed with the challenges of the ICU and neonatal ICU environment in mind.

**LTM MODULE**

With a common patient/data management interface, application modules offering the level of stand-alone system functionality and a user interface focused on maximizing training. NicoletOne offers you a unique blend of simplicity and sophistication.

**EEG/ICU MODULE**

The leading EEG/ICU module brings the Nicolet Viking series’ gold-standard in EEG and Nerve Conduction Studies to the NicoletOne system, from basic Motor Nerve studies all the way to Single Fiber EMG.

**EMG MODULE**

In today’s healthcare environment, providing quality care requires a balance between the capabilities of diagnostic systems and their ease-of-use.
